Student Name: T. Niranjan Kumar

Reg. No.: 192473007

Course Code: CSA1711

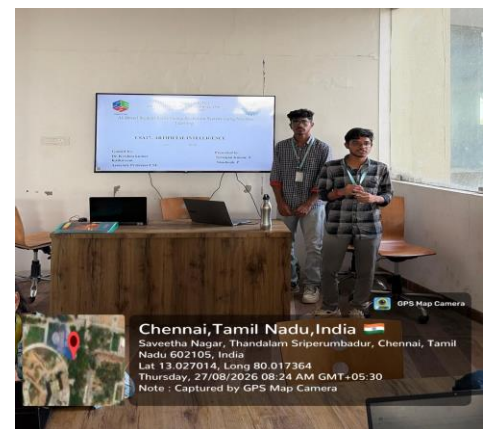

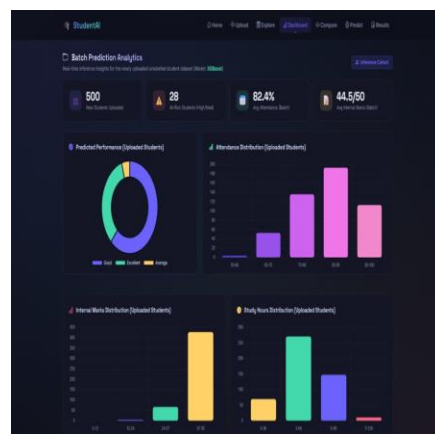

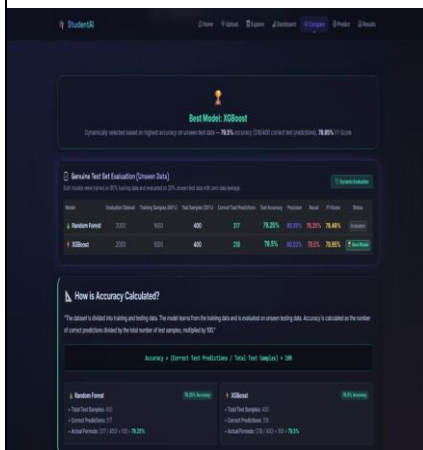

Slot: C

Course Name: ARTIFICIAL INTELLIGENCE

Course Faculty: Krishna Kumar Kathiresan

Project Title: AI-Based Student Performance Prediction System

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

Project Description: Module 2,3

This module focuses on predicting the academic performance of new student records using the selected best-performing model. The system accepts new student data without the Performance column and applies the same preprocessing used during training. StudentID and Name are maintained to identify each student in the final results. The system predicts the student's performance category and assigns an appropriate risk level. It also identifies possible contributing factors such as low attendance or low internal marks. This helps teachers identify weak or at-risk students and provide early academic support.
